

POWER PLANT

- Cooling tower piping
- Chemical cleaning systems
- Condenser water
- Cooling water
- Drain lines
- Fly ash slurry lines
- Turbine cooling
- Soot blower piping
- Fire protection systems
- Compressed air
- Demineralized water
- Service water
- Powdered coal piping
- Waste water
- Domestic water
- Hydronic heating systems
- Chilled water lines
- SO₂ removal systems
- Storm and roof drains

A complete system of stainless steel products is ideal for deionized water, chemical and related systems.

Plain end couplings provide full wall thickness joining for abrasive systems.

Large infalls/outfalls water treatment lines are easily assembled.

Large diameter valve settings have been common since the early 1930's.

The grooved system provides products for black or galvanized steel, stainless, copper, aluminum, PVC, HDPE, lined/coated and specialty piping.

Severe services such as pulverized coal, fly ash slurry and others can be handled with stainless pipe and standard couplings.
